

ALI ARMANI

Frontend Developer (HTML, CSS, JavaScript)

armani.ali@proton.me | github.com/Ali-Armani | linkedin.com/in/aliarmani | ali-armani.github.io

SUMMARY

Frontend developer with hands-on experience building responsive, cross-browser interfaces using HTML, CSS, and JavaScript, and debugging with Chrome DevTools. Delivered a complete e-commerce website independently for a real client, from planning through deployment, applying UI/UX principles and web performance optimization. Built a bilingual (English-Farsi) learning app with RTL/LTR internationalization and accessibility (WCAG) practices such as ARIA, keyboard operability, and reduced-motion support. Comfortable working remotely and asynchronously. Currently expanding into Tailwind CSS and React.

TECHNICAL SKILLS

Core: HTML5, CSS3, JavaScript (ES6+), Semantic Markup

Accessibility & i18n: WCAG Practices (ARIA, keyboard navigation, reduced-motion support), RTL/LTR Internationalization

Responsive & Cross-Browser: Responsive / Mobile-First Design, Cross-Browser Compatibility Testing (Chrome, Firefox, Brave)

Browser APIs & Storage: Web Speech API, localStorage, Chrome DevTools, Web Performance Optimization

Design Collaboration: UI/UX Fundamentals, Figma (basic familiarity)

Version Control: Git, GitHub, pull-request workflow (personal repositories)

Currently Learning: Tailwind CSS, React

PROJECTS

4Kids Doll Shop — E-Commerce Website

Freelance Client Project (Remote)

- Independently designed and built a responsive e-commerce website from scratch for a real retail client using HTML, CSS, and JavaScript, from requirements through launch.
- Tested across Chrome, Firefox, and Brave, and optimized product images for a significant page-speed improvement.

Live: 4kids-shop.pages.dev

Vocab Bridge — Bilingual English-Farsi Learning App

Personal Project

- Built a bilingual vocabulary flashcard app with full UI language switching between English and Farsi, including live document direction (RTL/LTR) and per-element lang/dir handling.
- Applied accessibility (WCAG) practices: skip link, ARIA live regions and labels, keyboard-operable controls, decorative icons hidden from assistive tech, and reduced-motion support.
- Integrated the Web Speech API for word pronunciation and used localStorage to persist theme and a spaced 'review mistakes' mode.

Live: ali-armani.github.io/vocab-bridge

Weather Forecast App

Personal Project

- Built a weather lookup app fetching live conditions for any city via a third-party API, routed through a backend serverless function to keep the API key secure and off the client.

Live: weather-forecast-chi-six.vercel.app

TaskFlow — Task Management App

Personal Project

- Built a fully responsive to-do/task management app focused on clean UI/UX, using Chrome DevTools to debug and verify consistent cross-device behavior.
