

ALI ARMANI

Frontend Developer · Expanding into React & Tailwind CSS

armani.ali@proton.me | github.com/Ali-Armani | linkedin.com/in/aliarmani | ali-armani.github.io

SUMMARY

Frontend developer with hands-on experience building responsive, accessible, and cross-browser web interfaces. Independently delivered a complete e-commerce website for a real retail client, from requirements through deployment, applying UI/UX principles and performance optimization. Built a bilingual (English-Farsi) learning app with full RTL/LTR support and WCAG accessibility practices. Comfortable with remote and asynchronous collaboration. Currently deepening skills in React, Tailwind CSS, and TypeScript fundamentals.

TECHNICAL SKILLS

Core: HTML5, CSS3, JavaScript (ES6+), Semantic Markup, Responsive / Mobile-First Design

Accessibility & i18n: WCAG Practices (ARIA, keyboard navigation, reduced-motion support), RTL/LTR Internationalization

Tools & APIs: Git, GitHub, Chrome DevTools, Web Performance Optimization, localStorage, Web Speech API, Figma (basic)

Currently Learning: React, Tailwind CSS, TypeScript fundamentals

PROJECTS

4Kids Doll Shop — E-Commerce Website

Freelance Client Project (Remote)

- Independently designed and built a fully responsive e-commerce website from scratch for a real retail client using HTML, CSS, and JavaScript — from requirements gathering through launch and deployment.
- Conducted cross-browser testing (Chrome, Firefox, Brave) and optimized product images, resulting in a significant page-speed improvement.
- Applied UI/UX principles focused on clear product presentation and a smooth mobile shopping experience.

Vocab Bridge — Bilingual English-Farsi Learning App

Personal Project

- Built a bilingual vocabulary flashcard app with full UI language switching between English and Farsi, including live document direction (RTL/LTR) and per-element lang/dir handling.
- Implemented strong accessibility (WCAG): skip link, ARIA live regions and labels, keyboard-operable controls, decorative icons hidden from assistive tech, and reduced-motion support.
- Integrated the Web Speech API for pronunciation and used localStorage to persist theme and a spaced 'review mistakes' mode.

Weather Forecast App

Personal Project

- Built a weather lookup app fetching live conditions for any city via a third-party API, routed through a backend serverless function to keep the API key secure and off the client.

Live: weather-forecast-chi-six.vercel.app

TaskFlow — Task Management App

Personal Project

- Built a fully responsive to-do/task management app focused on clean UI/UX, using Chrome DevTools to debug and verify consistent cross-device behavior.
